

Doubloon Lagoon™

Assembly Instructions

To print the components of *Doubloon Lagoon™* you will need a program which will read PDF files. Adobe Acrobat is a free PDF reader which can be downloaded at:

<http://www.adobe.com/products/acrobat/readstep.html>

Cards

In order to minimize the work involved in cutting and printing the cards, it is highly recommended that you use pre-perforated business card sheets to print your cards. The cards included in *Doubloon Lagoon™* are all standard business card size and each sheet of cards is prepared for printing directly to business card sheets.

The pre-perforated business card sheets that have the best overall performance are "Invent It!" Ready to Print Business Cards by *Hammermill Papers®*. In addition, Inkjet Clean Edge Business Cards from *Avery®* are acceptable. They have no perforations but a little more see-through than the "Invent It!" cards.

Before you print to your cards sheets it is recommended that at least one test print from your computer be attempted. This will ensure that the size, alignment and orientation are set properly. The card sheets and unit item sheet are in landscape mode. A few tests may be necessary.

Make sure that your printer is setup to print at "Actual Size" and that the printing area is "Centered" on the paper.

Map

It is recommended that 8.5"x11" card stock paper be used to for printing the maps. This makes them less flimsy than if you used regular paper.

After printing the map section can be cut to fit and secured using clips or tape for play.

Counters

After printing, counters can be mounted back-to-back as indicated on the sheets. When using card stock paper this will make them less flimsy and easier to flip over for reflection of damage or strength gains during gameplay. Alternatively, with some extra work thicker stock can be used for mounting.
